Movie Ticket	66.8%
Advertisers	8.9%

Mapping Business Outcome to Product Outcome

Why we should focus on conversion rate

By **increasing conversion rates**, we can drive **higher revenue**, improve customer satisfaction, optimize operations, and strengthen our competitive position.

Key Takeaway from secondary research

- In 2023, BookMyShow saw a **225% increase** in ticket sales, highlighting strong consumer demand for **live events**. However, this growth strains the booking system during peak times
- Users reported significant issues with booking **Coldplay and Cricket World Cup** tickets, including **system overload and long wait times**. This dissatisfaction poses a risk to customer retention, especially with competitors like Zomato District entering the market
- Enhancing user engagement through **personalized recommendations and loyalty programs** is crucial to retain customers in a competitive landscape.

Problem Hypothesis

Customers often face frustration during the booking process for high-demand events, and despite efforts to handle traffic spikes, the challenge lies in improving conversion rates without sacrificing system stability or risking abandonment, especially with competitors like Zomato District entering the market.

User Survey Insight

(Total users surveyed-21)

A large majority of users cited **not getting ticket** during high-demand events as a major frustration

Users expressed a strong desire for **real-time** updates on their queue position

As these are social events, there is significant interest in **group ticket purchasing**

Over 71 % of the user belong to the age group of **18-34**

62% were **first-time concert goers** and had limited understanding of the seating arrangements and the price based tiers which prolonged purchase decisions

User Persona

Ankit Mishra

Occupation: IT Professional

Age: 25

Behavior: Books tickets for concerts and cricket matches frequently

Pain Points:

- Frustrated by long wait times in queues during high-demand events.
- System crashes and failed payments lead to booking abandonment.

Riya Gupta

Occupation: College student

Age:

Behavior: Regular concert-goer, especially for high-demand events .

Pain Points:

- Logged out unexpectedly during the Coldplay ticket booking process.
- Missed out on tickets due to slower queue re-entry and unavailability before her turn.

User interview Insight

- Users expressed a desire for more transparency and clarity during the ticketing process.
- Many users were open to collaborative booking methods, indicating potential adoption of group-based systems.
- Real-time updates on ticket availability and queue position were mentioned as key for enhancing trust.
- Users faced frustration with system crashes during high-demand events, leading to incomplete purchases and missed opportunities.

Market Research	Mapping Outcomes	User Research	Problem Framing	Solution	Prioritization	Wireframing & System Design	Metrics & Pitfalls
What is the true problem? Customers face frustration due to long wait times, system crashes, and queue glitches during high-demand events. This results in high cart abandonment rates and dissatisfaction, impacting BookMyShow’s ticket sales conversion.		Is it a real problem? From user research, it’s evident that most users experience stress and frustration during high-demand event bookings. The platform's inefficiency leads to a poor customer experience and low conversion rates, especially when users are logged out or pushed back in the queue.		Values Generated by Solving it For Business  An improved ticketing system will increase user retention and conversion rates, driving higher revenue and partner trust. This helps BookMyShow maintain its market leadership. For Customers  A better experience with a stable queue system and reliable ticket access will increase satisfaction, resulting in fewer abandoned transactions and greater user engagement during high-demand events. For Event Partners  By ensuring smooth ticket sales and high customer retention, event partners can trust BookMyShow to manage critical events, leading to stronger partnerships and more repeat business.			
Why Solve it Now? Addressing the problem is critical as competition from Zomato District is imminent. If the issue remains unresolved, BookMyShow risks losing customer loyalty, event partners, and market share. Enhancing the booking experience could create a competitive advantage in high-demand situations.		Jobs to be done When trying to book tickets for a high-demand event, but facing long wait times, failed payments, and system crashes, please help me secure my tickets quickly and without frustration, so I can confidently attend the event I’m excited about. 18-35:The target user segment ,consists of frequent event-goers who seek seamless and reliable ticket booking experiences					

Market Research	Mapping Outcomes	User Research	Problem Framing	 Solution	Prioritization	Wireframing & System Design	Metrics & Pitfalls
-----------------	------------------	---------------	-----------------	---	----------------	-----------------------------	--------------------

The solutions are grouped into two pillars: **Improving customer experience** and **enhancing operational efficiency**.

Solution 1- VIP Tiered Queue & Lottery Access

How It Works: Users register for a lottery-based early access, with selected participants placed in a tiered queue. VIP users who are frequent buyers, get priority, giving them faster access. This system blends fairness from the lottery with rewards for loyal customers.

Risk: Lottery fatigue, and complex queue management during high-demand events.

Solution 2-TicketPods: Decentralized, AI-Driven Group Ticketing Experience

How It Works: Friends or family can form a "TicketPod," allowing the AI to assess group demand and optimize ticket allocation, enhancing the chances of securing tickets together and ensuring similar seating arrangements.

Risk: Risks include coordination issues from delays in group member confirmations, disrupting AI calculations, and potential complications in fairly splitting costs among participants.

Solution 3- Dynamic Slot Allocation with Queue Persistence(Tatkal tickets)

How It Works: A dynamic slot-based system releases event tickets in multiple time slots, allowing users to book in smaller windows. Queue persistence ensures users retain their position even if they lose connection, reducing server overload and improving fairness.

Risk: Potential overload at slot openings due to high traffic and user fatigue from repeated unsuccessful attempts.

Solution 4- Real-time Queue Transparency

How It Works: Users receive real-time updates on queue position, estimated wait time, and ticket availability by seating category. They can also opt for notifications when their turn is near, improving transparency and control throughout the booking process

Risk: Increased user stress from constant updates and potential server overload due to continuous real-time communication during peak demand.

Improving customer experience

Enhancing operational efficiency

Market Research	Mapping Outcomes	User Research	Problem Framing	Solution	 Prioritization	Wireframing & System Design	Metrics & Pitfalls
Solutions	User Value (30%)	Business Impact (25%)	Adoption Feasibility (25%)	User Engagement (20%)	Score (Out of 10)		
 VIP Tiered Queue & Lottery Access	9(2.7) Prioritized regular and loyal users .	9 (2.25) Higher revenue potential as lot	8 (2.00) Requires integration but feasible with demand control.	9(1.8) Loyal users get benefit, which keeps them engaged	 8.75		
Dynamic Slot Allocation with Queue Persistence	9 (2.7) Reduces anxiety for users as they keep their spot	8 (2.0) Maintains queue integrity and reduces drop-off	7 (1.75) Technical complexity but can be achieved	7 (1.4) Enhances user loyalty as users feel assured of their spot.	7.85		
TicketPods: AI-Driven Group Ticketing	9 (2.7) High social engagement as groups are prioritized	8 (2.0) Boosts sales as groups purchase tickets together	6(1.5) Complex AI-driven system but feasible	8 (1.6) High engagement, as users interact more with their groups	7.8		
Real-time Queue Transparency	8 (2.4) Provides control and reduces uncertainty for users	7 (1.75) Can reduce cart abandonment as users they know their status.	6 (1.5) Requires constant updates from servers, which causes strain	7 (1.4) Users may experience stress seeing ticket availability drop.	7.05		

Weighted Scoring for Prioritization

Wireframing : VIP Tiered Queue & Lottery Access

Home Screen – Live Event Overview

Coldplay Concert Event Details – Lottery Access

Ticket Lottery Option:
Upon opening the event page, users are presented with two options:
Enter Lottery: Users who missed the initial sale can join the lottery for a second chance to win tickets.
VIP Member Access:
For regular customers (who've earned VIP status), there's an option to bypass the lottery with priority access and exclusive benefits.

Queue Screen: Users who are in the VIP queue get real-time updates on their status

Payment Page

Streamlined interface for secure ticket purchase, with options for seat selection and payment methods

System Design: VIP Tiered Queue & Lottery Access

The backend for the VIP Tiered Queue & Lottery Access system orchestrates multiple processes to optimize high-demand ticket booking. It **prioritizes loyal users** by managing a tiered queue with VIP eligibility checks, and conducts a pre-sale lottery for early access.

Simultaneously, it monitors real-time ticket availability, handles payments and fallbacks, and issues booking confirmations. This robust flow enhances booking efficiency, reduces wait times, and ensures a fair, seamless experience for all users.

Key Metrics

North Star Metric	Conversion Rate of Ticket Sales for VIP Users (as a percentage of total available tickets).
L1 Metric - VIP Activation Rate	Percentage of Loyal Users Attaining VIP Status. Indicates the rate at which engaged users reach VIP status, offering insights into user satisfaction with the tier system.
L2 Metric - Time to Checkout for VIP Users	Average time taken by VIP users to complete ticket purchases. Shorter checkout times indicate a smoother, more efficient experience for VIP users.

Retention & Engagement Metrics

- 1.VIP Retention Rate:
- Percentage of VIP users returning for multiple events after their first VIP booking.
 - Helps assess the stickiness of the VIP offering.
- 2.Event Participation Rate (Lottery):
- Percentage of users participating in multiple lotteries post-failure.
 - A higher rate suggests users still trust the system despite missing out previously.

Pitfalls and Mitigations

- Pitfall: Perceived Unfairness by users who book ticket for very few events .
- Mitigation: Allocate a fixed percentage of tickets for regular users through the lottery. Provide exclusive discounts or offers to non-VIP users on future events to ensure they feel valued.
- Pitfall: Payment Drop-offs Due to High Upfront Costs
- For high-demand and expensive events , some users might abandon the checkout due to the large upfront payment required.
- Mitigation: Book Now, Pay Later (BNPL)
- Introduce a BPNL feature, allowing users to reserve their tickets without making an immediate full payment.
